

Crizandro Sonny G. Dela Cruz

IT Professional | Frontend Developer | FullStack Developer | Software Engineer

Irosin, Sorsogon | +63 991 496 2099 | sonnygdelacruz@gmail.com | GitHub: github.com/koala-bonjing

Experience

Frontend Intern | OnDemand Innovation *October 2025 – February 2026 | Remote*

- Actively participated across all phases of the Software Development Life Cycle (SDLC) within a fast-paced Scrum Agile environment, collaborating in daily stand-ups and sprint planning.
- Developed responsive UI components using React.js and TypeScript, minimizing cross-browser compatibility issues across multiple client projects.
- Integrated frontend interfaces with RESTful APIs backed by PostgreSQL, ensuring smooth and reliable data flow between client and server.
- Managed advanced version control workflows, leveraging GitHub CI/CD pipelines triggered via pull requests to automate code linting, run unit tests, and maintain high deployment quality.

Data Collection Specialist & Data Annotator | OutXource Inc. *2026 | Sorsogon |*

- Collected and processed motion capture datasets, directly supporting the development of robot training and AI models
- Maintained annotation quality in compliance with company standards, ensuring datasets were production-ready for AI training pipelines
- Reviewed and validated annotation batches, reducing data errors and ensuring consistent output quality across deliverables

Education

BS Computer Science

2022 - 2026

Computer Communication Development Institute - **Proficiency Award in Database Management**

Junior - Senior High School

2017 - 2022

Gabao National High School

Project

CCDI Automated Career Assessment Test *MERN Stack, Google Gemini API, JWT Authentication* [GitHub](#) | [Live Demo](#)

- Designed and developed an AI-powered career assessment web application using the MERN stack and Google Gemini API, replacing the institution's traditional paper-based admission testing process
- Implemented JWT-based authentication and session handling to secure student access and manage user flows across the platform
- Integrated Gemini AI to evaluate student responses and generate personalized course recommendations across 8 programs (5 four-year degrees and 3 two-year associate programs)
- Deployed on Vercel for institutional use, serving all future enrollees of CCDI — validated as highly acceptable based on formal thesis evaluation findings

LabXchange *React 18, TypeScript, Tailwind CSS, React Query, Zod, Vitest*

- Developed security and access control features for a production healthcare LIS, including 2FA, RBAC role hierarchy management, and audit logging for CIR/PPE tracking across patient records, test orders, and medical results modules
- Built a reusable data table refresh component adopted across multiple modules and engineered dynamic biometric print documents tailored per organization, improving report accuracy and cross-module consistency
- Upgraded third-party integration forms with revised API validation and MRE Draft Status filtering, and wrote unit tests with Vitest to ensure reliable external service connectivity.

Sorsogon Virtual Tour Mobile Application (WorldSkills ITSSB Test Project) *Java, Android Studio, Firebase*

- Designed and built a native Android virtual tourism application for Sorsogon following strict structural and design specifications.
- Implemented a secure login system featuring a dynamic, custom-generated 6-character Captcha validation mechanism that enforces rigorous alphanumeric and special character constraints to block automated bots].

- Engineered an interactive, clickable map interface that dynamically tracks and highlights selected municipalities, providing users with live destination counts and localized historical records.
- Structured a flexible NoSQL database architecture in Firebase to seamlessly store, sync, and retrieve real-time data for user profiles, local destination details, entrance fees, and customer-filtered amenity modules.

Additional Skills

-
- | | |
|---|--|
| <ul style="list-style-type: none">• Tools, Platforms & AI Assistants: Git, GitHub, VS Code, Figma, Vercel, Android Studio, Codex, Anti Gravity• Programming Languages: Python, JavaScript, TypeScript, Java• Web Development: React.js, Node.js, HTML5, CSS3, Express.js• AI & Automation: Google Gemini API, RESTful API Integration• Data & AI Pipeline: Data Collection, Data Annotation, AI Training Datasets, Motion Capture Processing | <ul style="list-style-type: none">• Authentication & Security: JWT Authentication, OAuth, Session Management• Databases: PostgreSQL, MongoDB, MySQL, Firebase |
|---|--|

Certifications

-
- Build a Faster, More Structured Express API with Node.js and TypeScript - LinkedIn Learning
 - TypeScript: Object-Oriented Programming - LinkedIn Learning
 - React: Using TypeScript (2019) - Linked Learning
